The farmhouse located on the Bond property midway between the nineteenth century log barn complex and a later, twentieth century barn is another early twentieth century product, a modest, vernacular dwelling characterized by the following T-shaped plan: with the gable end as the principal entrance facade, a two-story gable roofed structure is intersected by another gable roofed structure towards its northern (rear) facade.

The entire building is sheathed in aluminum siding over the original material, probably clapboard, which once covered the structure. The house rests on a cement block foundation with porches across three of its sides. The siding is white; the wooden trim, sash and cornice are painted white with some dark green trim.

The south (main entrance) facade features a five-bay-wide, one-story-high porch with slightly sloping shed roof which joins the porches on the west and east facades resulting in a wraparound. The southeast bay of this front porch is screened in as is its east facade neighbor. All porches possess simple railings of rectangular slats and turned baluster supports. The first floor level of the south facade is articulated by a pair of 1/1 double hung windows which light the living room toward the southwest corner, and a modern door toward the southeast. On the second story, three 1/1 double hung windows are evenly spaced across the facade. The pediment is enlivened by a central Palladian window outlined at its extremities in dark green and consisting of an arch headed 1/1 double hung window flanked by two shorter rectangular 1/1 double hung windows. The pediment is further ornamented by a triangular piece of wooden spoolwork inserted at the apex of the gable, the deep cornice returns and the straight piece of dark green wooden molding which extends across the bottom boundary of the pediment from return to return.

The east facade possesses a three-bay, screened porch as described above, the end of which abuts a one-story, tripartite, polygonal bay with each side punctuated by identical 1/1 double hung windows. On the northern side of this projection is a one-story porch sheltering a 1/1 window and back door at the northeast corner and supported by three of the same baluster posts. On the second story level are 1/1 double hung windows in the following locations: southeast corner, above the northernmost bay of the screened porch, on the southern side of the projection, centered in the east face of the projection and centered above the northeastern porch. In the gable of the projection is an arch headed 1/1 double hung window.

The west facade is articulated by three bays of the connecting porch sheltering one window in the middle bay. The porch abuts one rectangular projection of the intersecting block. Adjoining the north side of this is a small one-story addition which ends about three feet short of the northwest corner of the building. Fenestration is as follows: 1/1 double hung windows centered in the projection in both the first and second story levels above the porch and above the addition. The gable area of the projection is identical to that of the east facade with a central arch headed 1/1 double hung window and deep cornice returns.

The north (rear) facade consists of the gable end of the main block; two windows on first floor surmounted by two at second story level and a smaller rectangular 1/1

BUILDER/ARCHITECT

STATEMENT OF SIGNIFICANCE

This building is a typical example of an early twentieth century farmhouse built all over the state. It possesses several nice decorative touches which are distinctive: the Palladian window, the ornamental woodwork and the rather bizarre interior living room doorway treatment.

Additionally this comfortable house, which is in somewhat unkempt condition, completes the agrarian complex of the chunk of Greenwell State Park known as the Bond Farm (log barn and granary, SM 245; and two 20th century tobacco barns, SM 246A and C).

double hung window in the gable with those same deep returns.

The interior plan is characterized by a hall entered by the front southern door with a stair on the east wall and the entry to the living room to the west. (The living room doorway is a curious configuration created by cut out, semicircular door jambs). A door at the end of the hallway leads to the kitchen. Surrounds are elaborated by typical bulls-eye corner blocks joined to three straight pieces of molding.
